

Hello World

Setting up a basic circuit

This circuit encodes an input token as an SHR, routes it directly to the output, and decodes the result.

The encoded data is logged to the console.

Requirements

```
<< "Circuits.m"
```

Circuit

```
{
  "$schema": "https://creatingintelligence.org/schemas/circuit-v1.json",
  "hyperparameters": {"default": [1000, 10]},
  "dataflow": [
    {"component": "input", "plugin": "codec", "send": [11]},
    {"component": "output", "plugin": "codec", "receive": [{"slot": 11, "tags": ["log"]}]}
  ]
}
```

```
circ = Circuit[json];
circ["schematics"][ImageSize→ 120]
```

Run

```
circ["function"]("Hello, World!")
```

Slot 11: {30, 89, 333, 376, 420, 697, 746, 761, 823, 896}

```
Sequence[Hello, World!]
```
